

FFI-cluster Production Management

The vision is development of production systems that create sustainable benefits for the company, the environment, people and society

Prioritised R&D areas

Production strategies

- Dynamic strategies to meet increased speed of changing demands on a global market, e.g considering increased complexity in global manufacturing networks
- Roadmaps, methods and guidelines to support strategic decision processes and innovations, sustainability

Production system design & Industrialization

- Fully integrated development of products and processes for economic, ecological and social/human sustainability
- Design of optimal products and production systems characterized by high performance, environmental care, continuous learning and healthy working life.

- Methods and tools to support factory design processes, maintenance, ramp-up etc

Management and Control

- Competitive performance through empowered, motivated, healthy and skilled workforce at all levels
- Efficient production systems characterized by continuous improvements and innovation awareness.
- Sustainable improvement and development work
- Systems in place for competence management to identify, measure and validate competence.
- Coaching leadership
